```
The invention relates to a method for inhibiting TACI (transmembrane cc activator and intracellular CAML interactor) and/or B cell maturation protein (BCMA) activity in a mammal. The method comprises administering a specific binding partner for ARRI (670, a tumour necrosis factor-TNF cc family ligand), having the consensus region of TACI, BCMA, or the TACI/C BCMA extracellular consensus sequence, but not the extracellular region of TACI or BCMA. The method is useful for inhibiting activity of TACI cc gastrointestinal, pancreatic or prostate tumour april garchal or T-cell cc lymphoproliferative disorders, one or more solid tumours such as lung, cc gastrointestinal, pancreatic or prostate tumour. APRIL, BCMA and TACI cc diseases such as diarrhoea, psoriasis, allergies, pneumonia, atopic cc disease), drug and insect sting allergy, inflammatory bowel disease (Crohn's disease, colitis), scleroderma, autoimune disease (miltiple cc sclerosis, rheumatoid arthritis, systemic lupus erythematosus), fungal, cc bacterial, protozoal and viral infections (HIV), atherosclerosis, cancer cc is human BCMA protein cysteine-rich consensus region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Fig 10A; 94pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC The invention relates to a novel TALL-1 antagonist protein, comprising a CC sequence that differs from SEQ ID NO:2, or amino acids 134-285 of SEQ ID CC NO:2, by at least one modification in the region commecting &bgr; strands CC compared to wild-type TALL-1. A protein of the TALL-1 antagonist as CC compared to wild-type TALL-1. A protein of the invention has CC compared to main antirheumatic, antiinflammatory, antiarthritic, CC dermatological antidiabetic, neuroprotective, antithyroid, antipyretic, nephrotropic, and vasotropic activity. A TALL-1 antagonist may be used in CC a vaccine. A protein of the invention is useful for inhibiting TALL-1 CC biological activity in a mammal. TC is useful for inhibiting TALL-1 CC diseases, rheumatoid arthritis, systemic lupus erythematosus, insulin CC dependent diabetes mellitus, multiple sclerosis, myasthaenia gravis, CC Grave's disease, autoimmune hemolytic anaemia, autoimmune CC drave's disease, autoimmune hemolytic anaemia, autoimmune CC thrombocytopenic purpura, Goodpasture's syndrome, pemphigus vulgaris, CC acute rheumatic fever, post-streptococcal glomerulonephritis and CC domain (CRD) module of human BCMA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention provides novel tumor necrosis factor receptor ztnfr14 polymucleotides ADZ67753 and polypeptides ADZ67754, expression vectors and antibodies. Ztnfr14 polymucleotides are used in claimed methods for detecting a genetic abnormality in a patient and for detecting a cancer in a patient. Recombinant ztnfr14 polypeptide, optionally conjugated to a toxin, is used in a claimed method of killing cancer cells. Ztnfr14 polypeptides can be used to detect ligands, agonists and antagonists. The polypeptides can be used to detect ligands, agonists and antagonists. The polypeptides polynucleotides and antibodies may also be used in methods that modulate tumor growth, metastasis, and immunity such as separating resting from stimulated immune cells. The present sequence is that of the Cys-rich domain of human TNPR BCMA ADZ67760. This sequence was compared with that of ztnfr14 in the identification of ztnfr14 as a member of the
                                                                                                                                                                                                                                                                                                                                      Inhibiting activity of B cell maturation protein and/or transmembrane activator and intracellular cyclophilin ligand interactor, by administering a binding partner for APRIL, a tumor necrosis factor far

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC specific binding partner for APRIL (G70, a tumour necrosis factor-TNF CC family ligand), having the consensus region of TACI, BCMA, or the TACI/CC BCMA extracellular consensus sequence, but not the extracellular region CC of TACI or BCMA. The method is useful for inhibiting activity of TACI CC and/or BCMA in a mammal which is useful for treating B-cell or T-cell CC lymphoproliferative disorders, one or more solid tumours such as lung, CC gastrointestinal, pancreatic or prostate tumour. APRIL, BCMA and TACI CC antagonists are useful for treating inflammation and immune function CC diseases such as diarrhoea, psoriasis, allergies, pneumonia, atopic CC dermatitis, respiratory allergic disease (asthma, hypersensitivity lung CC disease), drug and insect sting allergy, inflammatory bowel disease (Crohn's disease, colitis), scleroderma, autoimmune disease (multiple CC sclerosis, rheumatoid arthritis, systemic lupus erythematosus), fungal, CC bacterial, protozoal and viral infections (HIV), atherosclerosis, cancer CC with leucocyte infiltration of the skin or organs. The present sequence is human BCMA protein extracellular domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Best Loc

lupus erythematosus; cancer such as leukemia, lymphoma, or multiple scleroma; or T-cell mediated disease such as graft rejection, graft versus host disease (GVHD) and inflammation. The present sequence polypeptides of the invention are useful for treating immune-related diseases, such as rheumatoid arthritis, multiple sclerosis, and systematics are such as the second systematics. The specification describes polypeptides that bind April or BAFF. The polypeptides inhibit APRIL or BAFF binding to B-cell maturation antigen (BCMA). APRIL and BAFF are tumor necrosis family (TNF) members. The

systemic

                                                                                                                                                                    The invention relates to a method for inhibiting TACI (transmembrane activator and intracellular CAML interactor) and/or B cell maturation protein (BCMA) activity in a mammal. The method comprises administering specific binding partner for APRIL (G70, a tumour necrosis factor-TNF family ligand), having the consensus region of TACI, BCMA, or the TACI/BCMA extracellular consensus sequence, but not the extracellular region of TACI or BCMA. The method is useful for inhibiting activity of TACI and/or BCMA in a mammal which is useful for treating B-cell or T-cell lymphoproliferative disorders, one or more solid tumours such as lung, gastrointestinal, pancreatic or prostate tumour. APRIL, BCMA and TACI articonists are useful for treating and immune function

APRIL, BCMA and TACI antagonists are useful for treating inflammation and immune function diseases such as diarrhoea, psoriasis, allergies, pneumonia, atopic dermatitis, respiratory allergic disease (asthma, hypersensitivity lung disease), drug and insect sting allergy, inflammatory bowel disease (Crohn's disease, colitis), scleroderma, autoimmune disease (multiple sclerosis, rheumatoid arthritis, systemic lupus erythematosus), fungal, bacterial, protozoal and viral infections (HIV), atherosclerosis, cancer with leucocyte infiltration of the skin or organs. The present sequence is human BCMA protein
                                                                                                                                                                                                                                                                                                   Identifying a modulator of gene expression for drug designing, by contacting a compound library with a cell expressing an anti-cell gene and reporter gene, and determining alteration in reporter gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Seed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               of TACI or BCMA. The method is useful for inhibiting action and/or BCMA in a mammal which is useful for treating B-ce lymphoproliferative disorders, one or more solid tumours

The present sequence represents a BCMA (not defined) polypeptide. BCMA is a necrosis factor (NF)-kB activator. The method of the invention is used to identify compounds which modulate BCMA activity (and thus NF-kB activity). The specification describes a method of identifying a polypeptide which increases gene expression from a promoter. The method involves contacting a library of with a cell which expresses a recombinant anti-cell death gene and a reporter gene operably linked to

polypeptide. BCMA is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            the promoter, and then determining whether the expression of the reporter gene is altered as a result of contact with library. The method is useful for identifying polypeptides which increase or decrease gene expression from a promoter. The BCMA polypeptide or nucleic acid are useful for preparing a pharmaceutical composition for treating cancer, apoptosis, viral infections, inflammatory response, such as rheumatoid arthritis, inflammatory bowel disease or septic shock. BCMA is useful for identifying compounds that modulate NF-kB expression and thus for drug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                systemic lupus erythematosus; myasthenia gravis; multiple sclerosis; rheumatoid arthritis; asthma; bronchitis; emphysema; pyelonephritis; end stage renal failure; glomerulonephritis; vasculitis; nephritis; renal neoplasm; multiple myeloma; lymphoma; light chain neuropathy; immune response; immunosuppression; graft rejection; joint pain; graft versus host disease; inflammation; swelling; anaemia; septic shock; insulin dependent diabetes mellitus; Crohn's disease; hypertension; renal artery stenosis; occlusion; cholesterol; renal emboli.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 184 AA;
                                 protein) re
                                                                                                   related to transmembrane activator and CAML-interactor (TACI) receptor TACI is a tumour necrosis factor (TNF) receptor. The extracellular domains of BR43x2 (an isoform of TACI), TACI or BCMA (a related B cell
                                                                                                                                                                                                                                                                                                                                              Inhibiting ztnf4 activity in a mammal, to treat autoimmune diseases, renal disease, graft versus host disease, and inflammation, comprise administering a BR43x2, TACI or BCMA extracellular domain polypeptid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Homo sapiens

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      with activated or resting B lymphocytes, effector T-cells, or with antibody production. The antibody production is associated with an autoimmune disease selected from systemic lupus erythematosus, mysathenia gravis, multiple sclerosis and rheumatoid arthritis. The ztnf4 activity and BR43x2, TACI or BCMA receptor-ligand engagement is associated with asthma, bronchitis, emphysema, end stage renal failure, glomerulonephritis, vasculitis, nephritis, pyelonephritis, renal neoplasms, multiple myelomas, lymphomas, light chain neuropathy, amyloidosis, moderating immune response, immunosuppression, graft rejection, graft versus host disease, joint pain, swelling, anaemia, or septic shock. BR43x2, TACI, and BCMA polypeptides, fusions, antibodies, agonists or antagonists can be used to treat hypertension, renal artery stenosis, or occlusion, and cholesterol or renal emboli
The invention relates to methods of using one or more agonists or antagonists to modulate the activity of the members of TNF (tumour necrosis factor) especially TALL-1, APRIL and TNF receptor (TNFR) e.g. TACI or BCMA. The method is useful for treating pathological conditions or diseases associated with increased TALL-1 and APRIL expression or activity. TALL-1 and APRIL antagonists are used to block the interaction between APRIL and TALL-1 with TACI or BCMA. They are useful for treating
                                                                                                                                                                                 Inhibiting or neutralizing TALL-1 or APRIL polypeptide biological activity, for treating autoimmune disorders and cancer, comprises exposing the cells to TALL-1 or APRIL polypeptide agonists or

The present invention relates to Tumour necrosis factor (TNF) and Apolrelated Leucocyte expressed Ligand 1 (TALL-1) nucleic acid molecules, proteins (including homologues), and their antibodies. The invention in particular relates to methods for regulating the interaction between TALL-1 and TALL-1 receptors (BCMA referred as B cell maturation factor) to regulate monocyte, macrophage and B lymphocyte mediated immune responses. TALL-1 protein is useful for identifying compounds that regulate B lymphocyte proliferation. It is also useful for treating B lymphocyte associated autoimmune disorders like rheumatoid arthritis, systemic lupus erythematosus (SLE), insulin dependent diabetes mellitus, multiple
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Thmour necrosis factor and ApoL-related Leucocyte expressed Ligand 1; therapy; autoimmune disorder; rheumatoid arthritis; multiple sclerosis; systemic lipus erythematosus; SLE; insulin dependent diabetes mellitus; thrombocytopenia purpura; acute rheumatic fever; Goodpasture's syndrome; haemolytic anaemia; Grave's disease; myasthenia gravis; chromosome 16; post-streptococcal glomerulonephiritis; polyarteritis nodosa; BCMA; B cell maturation factor; pemphigus vulgaris; B-lymphocyte proliferation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          a mammal suffering from cancer such as leukaemia, lymphoma, myeloma, cancers of lung and colon and autoimmune diseases e.g. rheumatoid arthritis, multiple sclerosis, psoriasis and lupus erythematosus. The present sequence is human BCMA protein
                                                                                                                                                                                                                                                                                                                                                                                                            Isolated TALL-1 protein is used to identify compounds that regulate lymphocyte proliferation, used to treat B lymphocyte associated autoimmune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       sclerosis, myasthenia gravis, Grave's disease, autoimmune haemolytic anaemia, autoimmune thrombocytopenia purpura, Goodpasture's syndrome, pemphigus vulgaris, acute rheumatic fever, post-streptococcal glomerulonephritis, or polyarteritis nodosa. The TALL-1 protein and its corresponding nucleic acid sequence are also useful in diagnostic assays. The present sequence is a human B cell maturation factor (BCMA) protein. It is the receptor for TALL-1 protein. BCMA gene is located on chromosome 16. In human tissues, BCMA is expressed by spleen and lymph nodes but not by brain, muscle, heart, lung, kidney, pancreas, testis and placenta. BCMA mENA is absent in the pro-B lymphocyte stage but its expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human BAFF-R; BAFF receptor; TNF family; immunoregulatory agent; immune-related disorder; B-cell growth inhibitor; BCMA; B-cell maturation inhibitor; immunoglobulin production inhibitor; autoimmune disorder; B-cell lymphoproliferative disorder; hypertension renal disorder; immunosuppressive disorder; HIV infection; organ transplantation; antiinflammatory; systemic lupus erythematosus; autoimmune haemolytic anaemia; Grave's disease; multiple myeloma; B-cell carcinoma; leukaemia; rapidly progressive glomerulonephritis;

BAFF-R, fusion proteins containing it, and BAFF-R. CC specific antibodies can be used for inhibiting B-cell growth, dendritic C cell-induced B-cell growth and maturation, and immunoglobulin production, CC and in the treatment of autoimmune disorders. B-cell lymphoproliferative CC disorders, hypertension and renal disorders. The BAFF-R proteins may also be used in the treatment of immunosuppressive disorders and HIV CC infection, and in patients undergoing organ transplantation. The BAFF-R proteins or BAFF-R specific antibodies may be used for treating, CC suppressing or altering an immune response involving a signalling pathway CC between BAFF-R and BAFF, thereby inhibiting inflammation. Since BAFF-R CC inhibits B-cell growth and maturation it is useful for treating diseases CC such as systemic lupus erythematosus, autoimmune haemolytic anaemia, rapidly progressive glomerulonephritis, and lymphomas. Nucleic acids encoding CC human BAFF-R may be used in gene therapy to treat tumours, lymphomas, CC autoimmune disorders and inherited B-cell-associated disorders. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   carcinoma e.g. human lung carcinoma, colon carcinoma, breast carcinoma, prostate carcinoma, and other carcinomas whose proliferation is modulated by APRIL. It is also useful for treating autoimmune diseases (Grave's disease, systemic lupus erythematosus-SLE); hypertension, cardiovascular diseases, renal disorders, B-cell lympho-proliferative disorders, immunosuppressive diseases, organ transplantation, inflammation and human immunodeficiency virus (HIV), and for treating, suppressing or altering an immune response involving a signalling pathway between APRIL-R and its ligand. APRIL-R DNA is also useful in gene therapy. The present sequence is human APRIL-R also referred as BCMA or BCM protein
                                                                                                                                                                                                                                  07-NOV-2000; 2000US-0246449P.

The method involves administering a composition comprising A proliferation Inducing Ligand Receptor (APRIL-R) also referred as B canaturation protein (EM or BCMA) antagonist that antagonises the interaction between APRIL and its cognate receptor(s). This method is useful for treating undesired cell proliferation such as cancer or useful for treating undesired cell proliferation such as cancer or useful receptors.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        designated Zthfr12 (I). (I) has cytostatic, immunosuppressive, CC dermatological, antiinflammatory, neuroprotective, antidiabetic, CC antirheumatic, antiarthritic, antiasthmatic, nephrotropic and hypotensive CC activities, and can be used in gene therapy. (I) can be used for CC (inhibiting, in a mammal, the activity of a ligand that binds Zthfr12 (e.g. ZTNF4), for treating disorders and diseases associated with B CC lymphocytes, activated B lymphocytes or resting B lymphocytes, and for CC inhibiting the proliferation of tumour cells. (I) is useful for treating CC autoimmune disorders such as systemic lupus erythematosus, myssthenia CC gravis, multiple sclerosis, insulin dependent diabetes mellitus, asthma, CC remal disease such as glomerulonephritis, vasculitis, chronic lymphoid CC remal disease such as glomerulonephritis, vasculitis, chronic lymphoid CC neoplasms, multiple myelomas, lymphomas, light chain neuropathy, or CC amyloidosis, hypertension, large vessel diseases, graft-versus host CC disease, graft rejection and Crohn's disease. (I) is useful for CC development, for modulating development of other cells, antibody prosent sequence represents a protein which is given to the exemplification of the present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is the protein sequence of a human polypeptide encoded by a gene that exhibits decreased expression in colon cancerderived metastases compared to normal colon tissue. It is an example of claimed polypeptides that are encoded by genes which are differentially expressed in metastatic colorectal cancer cells. Such polypeptides are useful in diagnostic and prognostic assays, for raising antibodies useful e.g. in immunotherapy, and in screening for modulator compounds of
                      B-cell maturation antigen and transmembrane activator and calcium modulator and cyclophilin ligand-interactor, useful for treating disorders e.g. inflammation or lymphoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; tumour; B-cell maturation antigen; transmembrane activator; calcium-modulator; cyclophilin ligand-interactor; TACI; gene therapy; neoplasm; chronic lymphocytic leukaemia; lymphoproliferative disease; non-Hodgkin's lymphoma; light chain gammopathy; inflammation; asthma;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New genes that are up- or down-regulated in colorectal cancer, useful for diagnosing colorectal cancer in a subject, or for identifying modulators of colorectal cancer-associated proteins and genes for treating

```
The invention relates to fusion proteins comprising transmembrane activator and calcium modulator and cyclophilin ligand-interactor (TACI) receptor group that binds tumour necrosis factor-like protein (ZTNF)2 or ZTNF4; and an immunoglobulin group comprising a constant region of an
mmunoglobulin. The invention
    18
    used to manufacture
    medicament
```

The invention relates to a novel TALL-1 antagonist protein, comprising a sequence that differs from SEQ ID NO:2, or amino acids 134-285 of SEQ ID NO:2, by at least one modification in the region connecting &bgr; strands D and E that reduces the biological activity of the TALL-1 antagonist as compared to wild-type TALL-1. A protein of the invention has

antirheumatic, antiinflammatory, antiarthritic

ımmunosuppressive,

The method involves using an antibody component that binds both the B-cell maturation antigen (BCMA) and the transmembrane activator and calcium-modulator and cyclophilin ligandinteractor (TACI) BCMA and TACI binding antibody compositions are useful for inhibiting proliferation of tumour cells, particularly inhibiting ZTMF4 activity in a mammal associated with increased endogenous antibody production or a disorder consisting of neoplasm, chronic lymphocytic leukaemia, multiple myeloma, non-Hodgkin's lymphoma, post-transplantation lymphoproliferative disease or light chain gammopathy or inflammation lymphocytic asthma. The invention is also useful in gene therapy. The present is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             dermatological, antidiabetic, neuroprotective, antithyroid, antipyreti nephrotropic, and vasotropic activity. A TALL-1 antagonist may be used a vaccine. A protein of the invention is useful for inhibiting TALL-1 biological activity in a mammal. TC is useful for treating autoimmune diseases, rheumatoid arthritis, systemic lupus erythematosus, insulin dependent diabetes mellitus, multiple sclerosis, myasthaenia gravis, grave's disease, autoimmune hemolytic anaemia, autoimmune thrombocytopenic purpura, Goodpasture's syndrome, pemphigus vulgaris, acute rheumatic fever, post-streptococcal glomerulonephritis and polyarteritis nodosa. The present sequence represents human BCMA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Type III transmembrane protein; insulin resistance; atherosclerosis; atheromatous disease; heart disease; hypertension; stroke; syndrome diabetes mellitus; hyperlipidaemia; hyperuricaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; genoxit; anorectic; antilipaemic; antiarteriosclerotic; cardi antidiabetic; hypotensive; ophthalmological; neuroprotective; nephrotropic; obesity; Tumour Necrosis Factor Receptor Super Family;

The invention relates to a novel antibody or its fragment, which immunospecifically binds tumour necrosis factor Delta (TNF-delta/APRII). The antibody of the invention has dermatological, immunosuppressive, antiinflammatory, antirheumic, antiarthritic, cytostatic, antianaemic, antiallergic, antiasthmatic, neuroprotective, ophthalmological, tuberculostatic, antidiabetic, antipsoriatic, anti-HIV, antiarteriosclerotic, vasostropic, thyromimetic, and haemostatic activity. The antibody or its fragment are useful for treating, preventing or ameliorating cancer such as Non-Hodgkin's lymphoma or multiple myeloma in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Genoxit activity for preventing or treating obesity. Genoxit is a member of the Tumour Necrosis Factor Receptor Super Family and is a Type III transmembrane protein. The agonists or antagonists of the invention are useful for treating or preventing obesity-related diseases or disorders, e.g. obesity, insulin resistance, atherosclerosis, atheromatous disease, heart disease (e.g. cardiac insufficiency, coronary insufficiency, high blood pressure), hypertension, stroke, syndrome X, diabetes mellitus (type I and II), hyperlipidaemia and hyperuricaemia, also diabetic complications, e.g. microangiopathic lesions, ocular lesions, retinopathy, neuropathy and renal lesions
                                                                                                                                                                                                                                   Novel isolated antibody that immunospecifically binds tumor necrosis factor delta, useful for treating, preventing or ameliorating Non-Hodgkin's lymphoma, multiple myeloma, rheumatoid arthritis or Sjogren's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              dermatological; immunosuppressive; antiinflammatory; antirheumatic; antiarthritic; cytostatic; antianaemic; antiallergic; antiasthmatic; neuroprotective; ophthalmological; tuberculostatic; antidiabetic; antipporiatic; anti-HIV; antiarteriosclerotic; vasotropic; thyromimetic; haemostatic; cancer; autoimmune disease; graft versus host disease; GVHD inflammatory disorder; proliferative disorder; single chain antibody;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   human, disease or disorder such as autoimmune disease, and graft versus host disease (GVHD). The autoimmune disease is systemic lupus erythematosus, rheumatoid arthritis or Sjogren's Syndrome. The antibody is useful for detecting, diagnosing, prognosing, treating, preventing or ameliorating a disease or disorder associated with aberrant APRIL or APRIL receptor. The disease or disorders includes autoimmune and inflammatory disorders such as autoimmune neutropenia, haemolytic anaemia, dermatitis, asthma, allergic encephalomyelitis, myocarditis, multiple sclerosis, uveitis, tuberculosis, diabetes mellitus, psoriasis, cancer of the immune system, particularly B cell cancers, immune disorders such as myasthenia gravis, Hashimoto's disease, immunodeficiency syndrome, Bruton's disease, infectious diseases (e.g. acquired immunodeficiency syndrome (AIDS)), and proliferative disorders (e.g. acquired immunodeficiency syndrome (AIDS)), and
                                                                 The present sequence represents a human BCMA polypeptide. The specification also describes TACI and BR3 polypeptides. TACI and BR3 are receptors. Tumour necrosis factor (TNF) family ligands TALL-1 and April bind to the TACI receptor, while TNF family ligands TALL-1 also binds to BR3 receptor. The TACI and BR3 receptor nucleic acid is useful for preparing a composition for treating systemic lupus erythematosus
                                                                                                                                                                                                                                                                                                                                                                                                          New nucleic acid encoding a TACIs or BR3 polypeptide, useful for preparing a composition for treating systemic lupus erythematosus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  03-AUG-2001;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ş
                                                                                CC overexpressed in haematological malignancies, and which encodes a
CC polypeptide or an immunogenic fragment of the polypeptide. Also
CC described: (1) an isolated polypeptide; (2) an expression vector
CC comprising (1) operably linked to an expression control sequence; (3) a
CC host cell comprising an expression vector; (4) an isolated antibody that
CC specifically binds to the polypeptide or its immunogenic fragment; and
CC (5) immunoconjugates comprising the antibody above, or an antibody that
CC specifically binds to a polypeptide, or its immunogenic fragment; encoded
CC (by (I). (I) has cytostatic and immunostimulant activities, and can be
CC used in vaccines and immunotherapy. The immunoconjugates are useful in
CC composition for treating cancer, e.g. multiple myeloma cell, chronic
CC lymphocytic leukaemia, B cell leukaemias, or lymphomas in humans, sheep,
CC primates, goats, bovines, equines, porcines, lupines, canines or felines.
CC fine polynucleotide (I) or polypeptide can be used for screening anti-
CC cancer agents, and generating antibodies or immunoconjugates for treating
CC or preventing the above-mentioned diseases. The polynucleotide,
CC polypeptide or antibody can be used for detecting, diagnosing or mentioned content of the c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Best
Sequence
                                             prognosticating the haematological malignancies described above. present sequence is used in the exemplification of the present i

                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel method for treating a neurodegenerative immunological disorder, demyelination or Central Nervous System (CNS) inflammation in a mammal. The method comprises administering B-cell maturation antigen (BCMA), or an antibody against BCMA or a BCMA ligand (the mammal has or is at risk of developing multiple sclerosis). The method of the invention has neuroprotective, nootropic, and antiinflammatory activity, and may have a use in gene therapy. The methods, BCMA, and antibodies are useful for treating a neurodegenerative immunological disorder such as multiple sclerosis, demyelination or CNS immunological disorder such as multiple sclerosis, demyelination or CNS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Treating a neurodegenerative immunological disorder, e.g. demyelination or inflammation in a mammal comprises administering a B-cell maturation antigen (BCMA), an antibody against BCMA or a BCMA ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     human; neurodegenerative immunological disorder; demyelination; Central Nervous System; CNS; inflammation; B-cell maturation antigen; BCMA; multiple sclerosis; neuroprotective; nootropic; antiinflammatory;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            conjugate comprises neutrokine-alpha protein and chelator, where the neutrokine-alpha protein (also known as B-lymphocyte stimulator (BLys). TALL-1, THANK and BAFF) is capable of binding neutrokine-alpha protein. The protein conjugate of the invention is useful in a complex with a metal ion associated with the chelator which is useful for administering radiotherapy to a subject such as human who is in need of radiotherapy, which involves administering the complex to the subject, where it is administered as an injectable solution, and the subject has a B-cell mediated disease. The subject has a condition chosen from non-Hodgkin's lymphoma, chronic lymphocytic leukaemia, multiple myeloma, systemic lupus erythematosus, rheumatoid arthritis, multiple sclerosis, Crohn's disease, diabetes, Wegener's granulomatosis, myasthenia gravis and asthma, preferably non-Hodgkin's lymphoma. The complex is useful for treating preferably non-Hodgkin's lymphoma. The complex is useful for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cancer, which involves administering it to a subject having cancer, where a cell of the cancer expresses a neutrokine-alpha receptor on its surface. The cancer is a B cell cancer, which is chosen from non-Hodgkin's lymphoma, multiple myeloma and chronic lymphocytic leukaemia. The complex is also useful for treating an autoimmune disease or disorder, chosen from systemic lupus erythematosus, rheumatoid arthritis and Sjogren's syndrome. The complex may also be used for diagnostic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Neutrokine-alpha conjugate useful for targeting complexed metal ion to cells expressing receptor (predominantly lymphoid) for radiotherapy treatment of, for example, non-Hodgkin's lymphoma comprises neutrokine-
                                                                                                                                                                                                                                                                                                                                                         imaging. A composition comprising the protein conjugate or the complex is useful for killing a cell chosen from a cell bearing a neutrokine-alpha receptor, and a cell in close proximity to a cell bearing neutrokine-alpha receptor, which involves contacting the cell with the composition to kill the cell. The cell is lymphocyte, B cell or cancerous cell that has metastasised into the lymphatic system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              systemic lupus erythematosus; rheumatoid arthritis; multiple sclerosis; Crohn's disease; diabetes; Wegener's granulomatosis; myasthenia gravis; asthma; cancer; Sjogren's syndrome; diagnostic imaging; lymphocyte; B cell; cancerous cell; metastasis; lymphatic system.

                                                                                                                            comprising a container, a label on the container and a composition of matter of (7); (9) a method of treating an immune related disease in a mammal; (10) a method for determining the presence of a PRO polypeptide in a sample suspected of having the polypeptide; (11) a method of diagnosing an immune related disease or an inflammatory immune response in mammal; (12) a method of identifying a compound that inhibits or minics the activity of or expression of a gene encoding a PRO polypeptide, and (13) a method of stimulating the immune response in a mammal. The PRO sequences have antiallergic, antianaemic, antitratic, antitratematic, antithyroid, CNS, dermatological, gastrointestinal, antirheumatic, antithyroid, CNS, dermatological, gastrointestinal, antiriheumatic, hepatotropic, immunostimulant, immunosuppressive, muscular, nephrotropic, neuroprotective, osteopathic, respiratory, vasotropic and virucide activities, and can be used in gene therapy. The nucleic acid (1) and the encoded polypeptides, compositions, kits and methods are useful in diagnosing and treating an immune related disease and in stimulating an immune response. The present sequence represents a human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes an isolated PRO nucleic acid (I). Also described: (I) a vector comprising (I); (2) a host cell comprising the vector of (I); (3) a process for producing a PRO polypeptides; (4) an isolated PRO polypeptide; (5) a chimeric molecule comprising the polypeptide of (4) fused to a heterologous amino acid sequence; (6) an antibody which specifically binds to a polypeptide of (4); (7) a composition of matter comprising a polypeptide of (4), an agonist or antagonist of the polypeptide or an antibody that binds to the polypeptide or an antibody that binds to the polypeptide or an antibody by the polypeptide of manufacture polypeptide or an antibody that binds to the polypeptide of the polypeptide or an antibody that binds to the polypeptide or antibody that binds to the polypeptide or an antibody that binds to the polypeptide or an antibody that binds to the polypeptide or an antibody that binds to the polypeptide of the polypeptide or an antibody that binds to the polypeptide or antibody that binds to the polypeptide or an antibody that binds to the polypeptide or an antibody that binds to the polypeptide o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New PRO polynucleotides and polypeptides, useful in useful in diagnosing and treating an immune related disease, e.g. systemic lupus erythematosus, rheumatoid arthritis, diabetes mellitus or asthma and in stimulating an immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       N-PSDB;

                                                                                                          The invention comprises a method of depleting B cells from a mixed population of cells, the method involves contacting the mixed populat of cells with BLyS antagonist (e.g. an immunoadhesin) and a CD20 bind antibody (e.g. hu2H7.v16). The method of the invention is useful for treating B cell malignancies and autoimmune disorders, such as: non-Hodgkin's olisease, follicular center cell lymphom lymphocytic leukemia, Hairy cell leukemia, rheumatoid arthritis, syst lugus erythematosus, Wegener's disease, inflammatory bowel disease, idiopathic thrombocytopenic purpura, multiple sclerosis, asthma, psoriasis, IgA nephropathy, myasthenia gravis, vasculitis, diabetes a glomerulonephritis. The present amino acid sequence represents a huma

                                                                                                                                                                      Query Match
                                                                                                                                                                                                                                                                                and antibodies. Ztnfr14 polynucleotides are used in claimed methods for detecting a genetic abnormality in a patient and for detecting a cancer in a patient. Recombinant ztnfr14 polypeptide, optionally conjugated to a toxin, is used in a claimed method of killing cancer cells. Ztnfr14 polypeptides can be used to detect ligands, agonists and antagonists. The polypeptides, polynucleotides and antibodies may also be used in methods that modulate tumor growth, metastasis, and immunity such as separating resting from stimulated immune cells. The present sequence is that of human TNFR BCMA. This sequence was compared with that of ztnfr14 in the identification of ztnfr14 as a member of the TNFR family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New tumor necrosis factor receptor (TNFR) polypeptides, useful as detecting ligands, and for modulating tumor growth, metastasis an immunity, such as separating resting from stimulated immune cells

The polypeptides inhibit APRIL or BAFF binding to B-cell maturation antigen (BCMA). APRIL and BAFF are tumor necrosis family (TNF) members. The polypeptides of the invention are useful for treating immune-related diseases, such as rheumatoid arthritis, multiple sclerosis, and systemic lupus erythematosus; cancer such as leukemia, lymphoma, or multiple scleroma; or T-cell mediated disease such as graft rejection, graft versus host disease (GVHD) and inflammation. The present sequence represents a BCMA protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        B-cell maturation antigen.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC protein (BCMA) activity in a mammal. The method comprises administering a CC specific binding partner for APRIL (G70, a tumour necrosis factor-TWF CC family ligand), having the consensus region of TACI, BCMA, or the TACI/CC BCMA extracellular consensus sequence, but not the extracellular region of GC of TACI or BCMA. The method is useful for inhibiting activity of TACI or TACI or BCMA in a mammal which is useful for treating B-cell or T-cell local l
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Best Loc

The invention describes a method of treating genetically-defined disease associated with chromosomal aberrations yielding oncogenic fusion proteins (I), treating cancerous cells containing (I) in a heterogeneous cell population, treating proliferative diseases associated with mutant protein or cellular protein isoforms (II) dependent on heat shock protein (HSP)-90, or selectively treating cells expressing (II) involving administering HSP90-inhibitor. The method is useful for treating genetically-defined disease with chromosomal aberration yielding
                                                                                 or a disease characterised by a solid tumour such as papillary thyroid carcinoma, Ewing's sarcoma, melanoma, liposarcoma, rhabdomyosarcoma and synovial sarcoma. The method is also useful for treating viral
                                                                                                                                                                                                                                       oncogenic fusion protein, treating cancerous cells containing fusion protein in heterogeneous cell population, treating proliferative disease (e.g. rheumatoid arthritis or cancer) associated with mutant protein or cellular protein isoform dependent on heat shock protein (HSP)-90 (e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI;
                                                                                                                                p53), or selectively treating cells expressing mutant protein or cellular protein isoform in a patient heterozygous for (II). The method is useful for treating a disease e.g. haematopoietic disorder such as T or B cell lymphoma, chronic myeloid leukaemia (CML), APL, ALL, AML, NHL and CMML, or a disease characterised by a solid rumonum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Disclosure; Page 189-190; 389pp; English.

disorder; hypertension

```
The invention relates to the use of a BAFF receptor (BAFF-R, also known CC as BCMA) protein, or a BAFFR fusion protein as an agent for the CC treatment of a variety of immune-related disorders. BAFF-R is a member of the TNF (tumour necrosis factor) family, acting as an immunoregulatory agent, and also plays a role in the development of hypertension and CC related disorders. BAFF-R, fusion proteins containing it, and BAFF-R cc specific antibodies can be used for inhibiting B-cell growth, dendritic cell-induced B-cell growth and maturation, and immunoglobulin production, and in the treatment of autoimmune disorders. B-cell lymphoproliferative disorders, hypertension and renal disorders. B-cell lymphoproliferative cell-induced in the treatment of immunosuppressive disorders and HIV cell-insor and in patients undergoing organ transplantation. The BAFF-R growth and maturation organ transplantation. The BAFF-R cc inhibits B-cell growth and maturation it is useful for treating pathway between BAFF-R and BAFF, thereby inhibiting inflammation. Since BAFF-R cc inhibits B-cell growth and maturation it is useful for treating diseases such as systemic lupus erythematosus, autoimmune haemolytic anaemia, cc scale glowerlonephritis, and lymphomas. Nucleic acids encoding human BAFF-R may be used in gene therapy to treat tumours, lymphomas, autoimmune disorders and inherited B-cell carcinomas, leukaemia, rapidly progressive glomerulonephritis, and lymphomas. Nucleic acids encoding autoimmune disorders and inherited B-cell-associated disorders. The cc present sequence represents the BAFF-R fusion protein BAFF-R-FC.

CC comprising a mouse IgG-kappa signal sequence, residues 1-153 of human BAFF-R and a human IgG Fc sequence. (Updated on 11-SEP-2003 to
                                                                                                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Inhibiting dendritic cell-induced B-cell growth, maturation and B-cell lympho-proliferative disorder by administering BAFF-receptor polypeptide, chimeric molecule comprising receptor or anti-BAFF-R antibody homolog.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        autoimmune disorder; B-cell lymphoproliferative disorder; hypertension renal disorder; immunosuppressive disorder; HIV infection; organ transplantation; antiinflammatory systemic lupus erythematosus; autoimmune haemolytic anaemia; Grave's disease; multiple myeloma; B-cell carcinoma; leukaemia; rapidly progressive glomerulonephritis; lymphoma; gene therapy; cancer; tumour; IgG Fc; fusion construct.

The method involves administering a composition comprising A proliferation Inducing Ligand Receptor (APRIL-R) also referred as B maturation protein (BCM or BCMA) antagonist that antagonises the interaction between APRIL and its cognate receptor(s). This method useful for treating undesired cell proliferation such as cancer or carcinoma e.g. human lung carcinoma, colon carcinoma, breast carcinomorprostate carcinoma, and other carcinomas whose proliferation is mod

APRIL. It is also useful for treating

autoimmune diseases

carcinoma is modulated

The invention relates to a method of treating

associated with undesired cell proliferation

such as cancer

or

carcinoma

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        disease, systemic lupus erythematosus-SLE); hypertension, cardiovascular diseases, renal disorders, B-cell lympho-proliferative disorders, immunosuppressive diseases, organ transplantation, inflammation and human immunodeficiency virus (HIV), and for treating, suppressing or altering an immune response involving a signalling pathway between APRIL-R and its ligand. APRIL-R DNA is also useful in gene therapy. The present sequence is a fusion construct containing human APRIL-R also referred as BCMA or BCM protein, Fc region of human immunoglobulin G (IgG) and a signal sequence from murine Ig kappa cDNA.
